Research problem. In about 100 words, describe the problem of your research. Remember that it should be relevant both for the Russian / your country and (in some cases) for the global context. Be sure to indicate that your research is not unfounded and relies on extensive literature review. References in the APA-style will tell the reader that your research is based on a substantial body of valid research that already exists in the scientific databases (APA, 2020).

In the second paragraph of your annotation, you should write the **purpose of the study, or research aim**. There is a hint for you: write the purpose of the study in one not that long but profound sentence. Perhaps, in this paragraph, the reader will see such phrases as “explain the design”, “identify and conduct an experiment to verify”, “conduct a two-factor analysis”, “conduct a pilot project of the intervention program” and etc.

In the third paragraph, the reader expects to see the **research methods** that you used during your research project. There is a hint for you: brevity is the sister of talent, so you can simply write “Following the positivistic paradigm, we used quantitative research methodology, namely an anonymous survey was administered to 135 students using the ‘XXX’ questionnaire (link, 2012).” Please indicate the sampling technique, as well as what tools were used for the quantitative analysis of data.

Next, please, write the **conclusions and recommendations**. Sentences starting with “The results of the study can be used for / when / in ...” will be significant. If you plan to continue the research further, please, indicate further directions of your research.

Keywords: six, keywords, separated, by, commas, thanks.
